How to Set Up Auto Update from Reserva Connection Manager

Prerequisites

- Reserva Connection Manager (version 3.8 and above)

- Android player/s

Configuring the Update Server

1. On your computer, open the 'C' file directory.

2. Navigate to **C** > **Program Data** > **ONELAN** > **Reserva**.

3. Create a new folder and name it **APKUpdate**.

4. In a browser, go to the **Support** section of the Reserva website (https://reservaroomsigns.com) and download the Reserva Player App.

5. Save both the Player APK file and the XML file from the **Automatic Update** pack into the **APKUpdate** folder.

6. Open the XML file in a text editor.

7. Edit the href to include your RCM Web Server address (including the port number) followed by '/APKUpdate' before the APK file name.

Note: To obtain your web server address, go to **Manage** > **Web Service** on your Reserva Connection Manager.

8. Save the XML file.

Enabling Automatic Software Updates

1. On your Android player, log into the **Player Management** menu by tapping 5 times in the top left-hand corner of the screen.

2. Tap **Software Update**.

3. Select your preferred software update mode.

4. Enter the Update Server URL you obtained in the previous section.

5. Leave the username and password fields empty and tap **Test**.

6. If the test passes, tap **Done** and apply the changes.

Note: Should the test fail, a descriptive error will appear highlighted in red, If you are unable to resolve this issue, please contact ONELAN (support@onelan.com) for assistance.

7. The device will automatically pick up new apk updates and install them on your device.

8. If the device doesn't automatically update, you can check for new updates by tapping on **Check Now**.
